                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, CC antisinflammatory, neuroprotective, nootropic, antistinflammatory, neuroprotective, nootropic, antistinflammatory. Immunomodulator, and cardiovascular activities, and can CC ophthalmological, immunomodulatory and cardiovascular activities, and can CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC conthibute; diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic immunofical activities and can composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC conthibute; diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic immunofical activities and cancer, ischaemia or reperfusion injury, or ophthalmic immunofical activities and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The CC human mPGES-1 gene is located on chromosome 9, more specifically to Q934.3. The present invention also describes: (1) antisense compounds, CC mPGES-1, which specifically hybridise with the nucleic acid encoding CC inhibits its expression; (2) a method of inhibiting the expression of CC mPGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mPGES-1. MPGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, CC antidiabetic, immunomodulator, cardiant, neuroprotective, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound be used for preparing a composition for treating a disease or CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 838

                                                                                                                                                                                         হ
                                                                                                                                                                                                                                                                                                        The present sequence represents a chimeric antisense oligonucleotide crargeted to human microsomal prostaglandin E2 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, carding a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC inhibits ite expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antideense oligonuclectides and antisense compounds have cytostatic, cophibalmological, immunomodulator, cardiant, neuroprotective, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The human mpGES-1 gene is located on chromosome 9, more specifically to g934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid encoding conhibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mpGES-1. MpGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antisinse oligonucleotides and antisense compounds have cytostatic, and cantisinflammatory, neuroprotective, nootropic, antistrict, vasotropic, antistrictal, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     chimeric; antisense oligonucleotide; phosphorothioate; human; microsomal prostaglandin E2 synthase; mpCES-1; mpGES-1 inhibitor; microsomal prostaglandin E2 synthase; mpCES-1; mpCES-1 inhibitor; cardiant; neuroprotective; antiinflammatory; neuroprotective; nootropic; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation; Alzheimer's disease; arthritis; disbetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder;

           The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
                                                                                                                                                 New antisense compound, having a sequence targeted to a nucleic acid encoding mPGES-1, useful for preparing a composition for treating e.ginflammation, Alzheimer's disease, arthritis, diabetes, cancer or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 842
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9q34.3. The present invention also describes: (1) antisense compounds, charing a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and chibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal conting a disease or condition associated with mpGES-1. MpGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, cantidiabetic, immunomodulator, cardiant, neuroprotective, antionial neuroprotective, nontropic, antiarinflammatory, neuroprotective, nontropic, antiarinflammatory, neuroprotective, notropic, antiarinflammatory, neuroprotective, notropic, antiarinflammatory, included as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition associated with mpGES-1 e.g., inflammation, Alzheimer's compound condition 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        chimeric; antisense oligonucleotide; phosphorothioate; human; microsomal prostaglandin E2 synthase; mPGES-1; mPGES-1 inhibitor; microsomal prostaglandin E2 synthase; inhibitor; cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; antiinflammatory; neuroprotective; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation; Alzhelmer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder; cardiovascular disorder; neurological disorder; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin 82 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC maying a disease or condition associated with mpGES-1 wpGES-1 chimeric CC antisense oligonuclectides and antisense compounds have cytostatic, cantidiabetic, immunomodulator, cardiant, neuroprotective, antistinflammatory, neuroprotective, nootropic, antistribities, and can CC conthibation associated with mpGES-1 e.g., inflammation, Alzheimer's CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's conthibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's conthibitors, diabetes, cancer, ischaemia or reperfusion injury, or conthibitis, diabetes, cancer, ischaemia or reperfusion injury, or conthibitis, diabetes, cancer, ischaemia or reperfusion injury, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
microsomal prostaglandin E2 synthase; mPGES-1; mPGES-1 inhibit microsomal prostaglandin E2 synthase inhibitor; cytostatic; ar immunomodulator; cardiant; neuroprotective; antinfilammatory; neuroprotective; nootropic; antiarthritic; vasotropic; ophthal immunomodulatory; cardiovascular; gene therapy; inflammation; Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder

The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective,
                                                                                                                                                                                                                              antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense compound, having a sequence targeted to a nucleic acid encoding mPGES-1, useful for preparing a composition for treating e. inflammation, Alzheimer's disease, arthritis, diabetes, cancer or

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin EZ synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 by targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid encoding inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antistisense oligonucleotides and antisense compounds have cytostatic, antistinflammatory, neuroprotective, nootropic, antistifical, immunomodulatory and cardiovascular activities, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound cardiovascular activities, and can be used for preparing a composition for treating a disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      microsomal prostaglandin E2 synthase; mpGES-1; mpGES-1 inhibitor; microsomal prostaglandin E2 synthase inhibitor; cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; antidiflammatcory; neuroprotective; nootropic; antiarthritic; vasotropic; ophthalmological; immunomodulatory, cardiovascular; gene therapy; inflammation; Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder; cardiovascular disorder; neurological disorder; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 9434.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC inhibits its expression, (2) a method of inhibiting the expression of CC inhibits its expression, (2) a method of treating an animal CC having a disease or condition associated with mpGES-1 chimeric CC antisense oligonuclectides and antisense compounds have cytostatic, CC antisense oligonuclective, noctropic, antiarthritic, vasotropic, antiinflammatory, neuroprotective, noctropic, antiarthritic, vasotropic, cantinflammatory, neuroprotective, noctropic, antiarthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's contribute, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmol of the contribute of the condition and cardiovascular activities on injury, or contribute of the condition and cardiovascular activities of the condition associated with mpGES-1 e.g., inflammation, Alzheimer's contributed with mpGES-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a chimeric antisense oligonucleotide caracteristically to human microsomal prostaglandin E2 synthase (mpGES-1). The human mpGES-1 gene is located on chromosome 9, more specifically to compare the present invention also describes: (1) antisense compounds, caracteristically hybridise with the nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid encoding caracteristic its expression; (2) a method of inhibiting the expression of caracteristic its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal caracteristic immunomodulator, cardiant, method of treating an animal cantisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective, antidiabetic, immunomodulator, and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischemia or reperfusion injury, or cardiant, arthritis, diabetes, cancer, ischemia or reperfusion injury, or cardiant in the cardiant or reperfusion injury, or cardiant in the cardiant or reperfusion injury, or cardiant in the cardiant 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandia E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9344.3. The present invention also describes: (1) antisense compounds, mPGES-1, which specifically hybridise with the nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues, and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antisense oligonucleotides and antisense compounds have cytostatic, antisense oligonucleotides and antisense compounds have cytostatic, and cantiniflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, antiarthritic, vasotropic, antiarthritic, vasotropic, antiarthritic, vasotropic, antiarthritic, vasotropic, can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, hlzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                     Query Match

Human; ss;

interleukin-4 receptor; IL-4; interleukin-5 receptor;

```
chosen from a gene encoding interleukin (II)-4 receptor, interleukin (II)

-5 receptor, CCR1, CCR3, Botaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,

C tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention

also relates to a method of screening a candidate compound that binds to

one or more nucleic acid target(s) or expressed product(s), for the

prevention and/or treatment of a respiratory or lung disease. The

coligonucleotides are useful for reducing or inhibiting expression of a

gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,

CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,

cryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are

useful for preventing or treating a respiratory or lung disease. The

crespiratory or lung disease is associated with hyper-responsiveness to

and/or increased levels of, adenosine and/or levels of adenosine A

receptor(s), and/or asthma and/or lung allergies associated with

cinflammation or an inflammatory disease. The respiratory or lung disease

is chosen from airway inflammation, allergies associated with

cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CCR1; CCR3; Eotaxin-1; RANTES; MCP4; CD23; ICAM; VCAM; tryptase a; tryptase b; PD84 A; PD84 B; PD84 C; PD84 D; respiratory disease; lung disease; hyper-responsivenese; adenosine; adenosine A receptor; asthma; lung allergy; inflammation; inflammatory disease; alivway inflammation; allergy; impeded respiration, cystic fibrosis; chronic obstructive pulmonary disease; COPD; allergic rhinitis; acute respiratory distress syndrome; pulmonary hypertension; lung inflammation; bronchitis; airway obstruction; bronchoconstriction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to oligonucleotides anti-sense to an initiation codon, coding region, 5' or 3' intron-exon junction, intron or region with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel single or multiple target oligonucleotide anti-sense to e.g. initiation codon, intron of respiratory disease-relevant gene e.g. CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
Sequence 20
                                                                                                          allergic rhinitis, acute respiratory distress syndrome, pulmonary hypertension, lung inflammation, bronchitis, airway obstruction or bronchoconstriction.                                                                                                                                                                                                                                                                                           The invention describes a reagent (I) comprising a particle bound to at CC least one Raman label and a specific binding member, where the Raman CC label can be activated to provide a surface-enhanced Raman scattering (SERS) effect or comprising a specific binding member having two or more different Raman labels bound to it. Also described are: a test kit (II), comprising (I) in one container and a silver, gold or copper Raman cCC (III), having a bundle of optical fibres terminating with ends of the optical fibre, where a several of the optical fibres have (I) located at the ends of the optical fibre. (I) is useful for: detecting for the presence or absence of one or more target analytes in a sample, the carget analytes having at least two binding sites; detecting the presence of the nucleic acid having at least two portions; and for screening one or more more daid having at least two portions; and for screening one or more specific receptors. This sequence represents an oligonucleotide cassociated with the SERS-based detection analyte detection method.
                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a compound which specifically hybridizes with a nucleic acid molecule encoding GFAT, and inhibite the expression of GFAT. Specifically claimed are antisense oligonucleotides capable of modulating the expression of GFAT, and which comprise any of the 3063 sequences of 20 base pairs, given in the specification. The compound, composition and methods are useful for treating a disease or condition associated with GFAT, such as a disease or condition, e.g. diabetes, a cardiovascular or neurological disorder, ischemia/reperfusion injury. They are also useful in research and diagnostics for modulating the expression of GFAT. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2'-MOE wings and a deoxy gap, these oligonucleotides inhibit human GFAT expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New compounds, particularly antigense oligonucleotides targeted to a nucleic acid encoding glutamine-fructose-6-phosphate amidotransferase (GFAT), for treating diabetes, a cardiovascular or neurologic disorder, ischemia/reperfusion injury.
                                                                                                                                                                                                                                                                                                                                                                 Sequence 20 BP; 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 4; SEQ ID NO 2100; 175pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2004-348453/32.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     17-OCT-2002; 2002US-0419268P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 02-OCT-2003; 2003WO-US033332

The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in a xenotransplant rejection or mechanical organ replacement rejection, in a individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a primer for a 50 mer oligonucleotide marker for diagnosis and monitoring of allograft rejection and other disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual, comprises detecting the expression level of

                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                     ঠ
                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of detecting a nucleic acid with at CC least two portions by providing a type of nanoparticle-oligonucleotide CC conjugate, contacting the nucleic acid and nanoparticles to allow CC hybridisation of the oligonucleotides with the two or more portions of CC the nucleic acid and observing a detectable change brought about by CC hybridisation. The oligonucleotides have a sequence complementary to the GE sequence of at least two portions of the nucleic acid. Hybridisation of CC in a detectable change. The method is used for detection and separation CC in a detectable change. The method is used for detection and separation CC of nucleic acids (e.g. viral DNA, a gene associated with a disease, bacterial DNA, fungal DNA, synthetic DNA, structurally-modified DNA, DNA CC from biological sources or PCR products) for diagnosis of various CC diseases (such as genetic diseases, bacterial infections and viral CC monitoring gene therapy. This sequencing, paternity testing and CC coligonucleotide of the invention.
                                                                                                                                                                                                                                                                        Matches

(first entry)

ADP69379;

human; antisense oligonucleotide; mitochondrial membrane; Human mitoNEET-specific antisense oligonucleotide #273.

```
The invention relates to a method of detecting a nucleic acid with at CC least two portions by providing a type of nanoparticle-oligonucleotide cconjugate, contacting the nucleic acid and nanoparticles to allow CC hybridisation of the oligonucleotides with the two or more portions of the nucleic acid and observing a detectable change brought about by CC hybridisation. The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides have a sequence complementary to the CC in a detectable change. The method is used for detection and separation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. The method is used for detection and separation CC in nucleic acids (e.g. viral DNA, a gene associated with a disease, CC bacterial DNA, fungal DNA, synthetic DNA, structurally-modified DNA, DNA CC from biological sources or PCR products) for diagnosis of various of diseases (such as genetic diseases, bacterial infections and viral CC infections) and for forensics, DNA sequencing, paternity testing and consistoring gene thorapy. This sequence represents a linking
                                                                                                           Matches
                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            29-JAN-1999;

The antisense oligonucleotides of the invention are useful for modulating mitoNEET expression and for treating diseases or conditions associated with mitoNEET, such as: diabetes, immunological disorders, cardiovascular disorders including hypertension, neurological disorders, and sechaemia/reperfusion injuries. The present DNA sequence represents a mitoNEET specific antisense oligonucleotide of the invention. NOTE: The present sequence is a 2'-methoxyethyl (2'-MOE) gapmer with a phosphorothioate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      thiazolodinediones (referred to as: mitoNEET). The antisense oligonucleotides of the invention are useful for modulating mitoNEET expression and for treating diseases or conditions associated with mitoNEET, such as: diabetes, immunological disorders, cardiovascular disorders including hypertension, neurological disorders, and ischaemia/reperfusion injuries. The present DNA sequence represents a mitoNEET-specific antisense oligonucleotide of the invention. NOTE: The present sequence is a 2'-methoxyethyl (2'-MOE) gapmer with a phosphorothioate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense oligonucleotides encoding mitoNEET, useful for modulating mitoNEET expression or for treating diseases associated with mitoNEET, e.g. diabetes, immunological disorders or cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Anorectic; Antidiabetic; Muscular; Gene Therapy; CpG island; IGF2 gene intron 3; muscle mass; fat deposition; teat number muscle deficiency; diabetes; PCR; primer; ss; pig.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 4; SEQ ID NO 400; 226pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method (M1) for selecting an animal comprises testing the animal for the presence of a nucleic acid comprises testing the animal for the presence of a nucleic acid complication affecting; the activity of an evolutionary conserved CpG island located in intron 3 of an IGF2 gene; and/or binding of a nuclear factor to an IGF2 gene. The nuclear factor is capable of binding to a compound of the IGF2 gene; and/or binding of a nuclear factor is capable of binding to a compound capable of an evolutionary conserved CpG island, located in intron 3 of the IGF2 gene. The stretch is functionally equivalent to (ADQ80709). The nucleic acid modification in ADQ80709 comprises a G to A transition capable of a colaimed is a method (M2) for modulating an animal with capacities related to muscle mass, fat deposition, and/or test number. Also claimed is a method (M2) for modulating mRNA transcription of an capable of modulating binding of a nuclear factor to an IGF2 gene. Also claimed is a method (M3) for identifying a compound capable of modulating mRNA transcription of an IGF2 gene and a method (M4) for identifying a compound capable of modulating mRNA transcription of an IGF2 gene in a cell or organism. (M3) and (M4) are useful for identifying compounds capable of modulating mRNA transcription of an IGF2 gene in a cell or organism. (M3) and was useful for identifying compounds capable of modulating identified are potentially useful for creating obsety, muscle deficiencies and diabetes. The present sequence is a primer which was used to produce porcine sequence tagged sites (STS) in an example from the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SCF; stem cell factor; gene therapy; haematopoietic progenitor cell;

Coperatively linked to an expression control sequence, and isolating the Coperatively linked to an expression control sequence, and isolating the Corrisponded or transfected with an expression construct comprising a CC vertebrate SCF polypeptide-encoding DNA operatively linked to a CC heterologous expression regulatory sequence, permitting the expression of CC the vertebrate SCF polypeptide in the host cell. Disclosed as new are rat CC and human mucleic acids encoding SCF, SCF protein fragments. The DNA CC sequences are useful for effecting the large scale synthesis of SCF by a CC variety of recombinant techniques or for generating new and useful viral CC and circular plasmid DNA vectors, new and useful viral CC and circular plasmid DNA vectors, new and useful transformed and circular plasmid products. The DNA sequences are also useful viral CC and circular plasmid products. The DNA sequences are also useful viral CC and tis related products. The DNA sequences are also useful viral CC protein synthesis, in genetic therapy in humans and other mammals, and CC protein synthesis, in genetic therapy in humans and other mammals, and CC paroxymmal nocturnal haemoglobinuria, myelofibrosis, multiple myeloma, CC useful for treating haematopoietic disorders, e.g., aplastic anaemia, CC paroxymmal nocturnal haemoglobinuria, myelofibrosis, multiple myeloma, CC disorders such as piebaldism and vitamin B 12 and folit acid deficiency, Diamond Blackfan anaemia, Di Guglielmo CC syndrome, congestive splenomegaly, Kala awar, sarcoidosis, primary consisting neurological damage, infertility states, intestinal damage consisting neurological damage, infertility states, intestinal damage consistence is a universal SCF pCR primer used in the isolation of SCF DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-JUN-1990;

RESULT 858
ADP99302/c
ID ADP993
The invention relates to preparing a (vertebrate) human stem cell factor (C (SCF) polypeptide comprising growing host cells transformed or transfected with DNA encoding a human SCF that stimulates growth of the comprisite progenitor cells under nutrient conditions, the DNA being CC operatively linked to an expression control sequence, and isolating the CC operatively linked to an expression control sequence, and isolating the CC polypeptide produced. Also included is a recombinant host cell the control sequence, permitting the control sequence programment of the control sequence, permitting the expression of the vertebrate SCF polypeptide encoding DNA operatively linked to a control sequence, permitting the expression of the vertebrate SCF polypeptide in the host cell. Disclosed as new are rated and human nucleic acids encoding SCF, SCF proteins from a number of other comminate and recombinantly expressed SCF proteins from a number of other comminate and recombinantly expressed SCF protein fragments. The DNA sequences are useful for effecting the large scale synthesis of SCF by a cariety of recombinant techniques or for generating new and useful viral and circular plasmid DNA vectors, new and useful transformed and croamer of the polypeptide products. The DNA sequences are also useful as control of the protession of such host cells and new and useful as control of the protession of the polypeptide products. The DNA sequences are also useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          10-APR-1991;

The SCF is CC useful for treating haematopoietic disorders, e.g., aplastic anaemia, CC paroxysmal nocturnal haemaglobinuria, myelofibrosis, myelosclerosis, CC osteopetrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, CC Hodgkin's disease, lymphoma, Gaucher's disease, Niemann-Pick disease, CC Hodgkin's disease, refractory crythroblastic anaemia, Di Guglielmo CC syndrome, congestive splenomegaly, Kala awar, sarcoidosis, primary CC sylenic pancytopaenia, miliary tuberculosis, disseminated fungus disease, CC Fulminating septicaemia, malaria, vitamin B 12 and folic acid deficiency, CC pyridoxine deficiency, Diamond Blackfan anaemia, and hypopigmentation CC disorders such as piebaldism and vitiligo. The SCF are also useful for treating neurological damage, infertility states, intestinal damage CC resulting from irradiation or chemotherapy, and AIDS. SCF is also useful for enhancing haematopoietic recovery after acute blood loss and as a CC boost to the immune system for fighting neoplasia (cancer). The present cxx

                             A method for the analysis of cDNA comprises (a) preparing an aggregate of double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                    WPI; 1995-018287/03.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ঠ
                                           ঠ
                                                                                                                                                                                                                                                                                                    The sequence is that of a bovine microsatellite sequence obtd. by CC screening a library of bovine MboI DNA fragments of between 250 and 500 bp with an (AC)15 and a (TC)15 oligonucleotide probe. One out of 50 CC clones cross-hybridised. Assuming independent distribution of microsatellites and MboI sites, the frequency of (T6) >9 microsatellites of the bovine genome is estimated at >100, 000. The sequence information CC in the bovine genome is estimated at >100, 000. The sequence unformation CC for ca. 230 such bovine microsatellites is summarised in the specification and indexed herein (see below). The sequences upstream and CC downstream of the microsatellite sequence were used to generate the required PCR primers for in vitro amplification of the corresp.

CC microsatellite (using the program OPTIPRIM). The microsatellites may be used to identify individuals, for parentage testing, and in the genetic mapping of economic trait loci, or genes involved the determinism of correct pince in the program of the program of traits esp. in cattle, to allow selective breeding.                          A method for the analysis of cDNA comprises (a) preparing an aggregate (double-stranded cDNAs by using an aggregate of mRNAs and a plural type (labelled reverse transcription primers (GRNESEQ filles AQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Analysis of cDNA and gene expression - by digestion with restriction enzymes.

                                                                                                                                                                                                                                                                       A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESSQ files AQ75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A method for the analysis of cDNA comprises (a) preparing an aggregate (double-stranded cDNAs by using an aggregate of mRNAs and a plural type (labelled reverse transcription primers (GENESEQ files AAO75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                     Analysis of cDNA and gene expression - by by digestion with restriction enzymes.
                                                                                                                                                 16-APR-1993;

                                                                                                                                           A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily

The electrophoresing the digested aggregate of cDNAs in separate lanes.

The method can be used to analyse gene expression rapidly and easily

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GBNESEO files AAO75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                      Analysis of cDNA and gene expression - by digestion with restriction enzymes.
                                                                                                                                                                                                                                                                                                                                                       Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Reverse transcription primer used in cDNA analysis technique.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      04-AUG-1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Analysis of cDNA and gene expression - by digestion with restriction enzymes.

```

A method for the analysis of cDNA comprises double-stranded cDNAs by using an aggregate

(a) preparing an aggregate of mRNAs and a plural type

유 유

```

                                                                                                                                                                                                                                                                                                                                                                                                                             A method for the analysis of cDNA comprises (a) preparing an aggregate of double-stranded cDNAs by using an aggregate of mRNAs and a plural type (labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) the double stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in separate lanes. The electrophoresing the digested aggregate of cDNAs in separate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 21 BP; 1 A; 0 C; 3 G; 17 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                         A method for the analysis of cDNA comprises (a) preparing an aggregate of double-stranded cDNAs by using an aggregate of mRNAs and a plural type of abelled reverse transcription primers (GENESEQ files AAQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                         AAQ75706 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Analysis of cDNA and gene expression - by digestion with restriction enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AAQ75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798)

                                                  A method for the analysis of cDNA comprises (a) preparing an aggregate of double-stranded cDNAs by using an aggregate of mRNAs and a plural type (labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AQ75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes.
